State	Finished
Completed on	Tuesday, 24 September 2024, 8:50 PM
Time taken	15 mins 53 secs
Marks	5.00/10.00
Grade	**50.00** out of 100.00

Question **1**

Complete

Mark 0.00 out of 1.00

Given the following classes, which of the following can independently replace INSERT IMPORTS HERE to make the code compile? (Choose all that apply)

```
package aquarium;
public class Tank { }
package aquarium.jellies;
public class Jelly { }
package visitor;
INSERT IMPORTS HERE
public class AquariumVisitor {
public void admire(Jelly jelly) { } }
```

Select one or more:

- [x] **a. import aquarium.jellies.*;**
- [ ] **b. import aquarium.*.Jelly;**
- [x] **c. import aquarium.*;**
- [ ] **d. None of these can make the code compile.**
- [x] **e. import aquarium.jellies.Jelly;**
- [ ] **f. import aquarium.jellies.Jelly.*;**

Question 2

Complete

Mark 1.00 out of 1.00

What is the output of the following application?

```
1: public class CompareValues {
2: public static void main(String[] args) {
3: int x = 0;
4: while(x++ < 10) {}
5: String message = x > 10 ? "Greater than" : false;
6: System.out.println(message+","+x);
7: }
8: }
```

Select one or more:

- [x] **a. The code will not compile because of line 5.**
- [ ] **b. Greater than,11**
- [ ] **c. false,11**
- [ ] **d. false,10**
- [ ] **e. The code will not compile because of line 4.**
- [ ] **f. Greater than,10**

Question 3

Complete

Mark 1.00 out of 1.00

Which are true statements? (Choose all that apply)

Select one or more:

- [x] **a. String is immutable.**
- [ ] **b. StringBuffer is immutable**
- [ ] **c. An immutable object cannot be garbage collected.**
- [ ] **d. StringBuilder is immutable**
- [x] **e. An immutable object can be garbage collected.**
- [x] **f. An immutable object cannot be modified.**
- [ ] **g. An immutable object can be modified.**

Question 4

Complete

Mark 0.00 out of 1.00

Which of the following methods compile? (Choose all that apply)

Select one or more:

- [ ] **a. public int methodF() { return;}**
- [ ] **b. public int methodE() { return 9.0;}**
- [x] **c. public int methodD() { return 9;}**
- [x] **d. public void methodD() {}**
- [x] **e. public void methodA() { return;}**
- [ ] **f. public int methodG() { return null;}**
- [x] **g. public void methodB() { return null;}**

Question 5

Complete

Mark 0.00 out of 1.00

Which statement(s) are correct about the following code? (Choose all that apply)

```
public class Rodent {
protected static Integer chew() throws Exception {
System.out.println("Rodent is chewing");
return 1;
}
}
public class Beaver extends Rodent {
public Number chew() throws RuntimeException {
System.out.println("Beaver is chewing on wood");
return 2;
}
}
```

Select one or more:

- [ ] **a. It fails to compile because the type of the exception the method throws is a subclass of the type of exception the parent method throws.**
- [x] **b. It will compile without issue.**
- [ ] **c. It fails to compile because of a static modifier mismatch between the two methods.**
- [ ] **d. It fails to compile because the return types are not covariant.**
- [ ] **e. It fails to compile because the method is protected in the parent class and public in the subclass.**

Question 6

Complete

Mark 1.00 out of 1.00

Consider the following Java code that uses a custom object as a key in a HashMap:

```
import java.util.HashMap;
class Person {
    String name;
    int age;

    Person(String name, int age) {
        this.name = name;
        this.age = age;
    }
}

public class Main {
    public static void main(String[] args) {
        HashMap<Person, String> map = new HashMap<>();
        Person p1 = new Person("Alice", 30);
        Person p2 = new Person("Alice", 30);
        map.put(p1, "Engineer");
        System.out.println(map.get(p2));
    }
}
```

What will be the output of the above code?

Select one or more:

- [ ] **a. Runtime exception**
- [ ] **b. Compilation error**
- [x] **c. null**
- [ ] **d. "Engineer"**

Question 7

Complete

Mark 1.00 out of 1.00

Consider the following Java code:

```
import java.util.HashMap;

public class Main {
    public static void main(String[] args) {
        HashMap<String, Integer> map = new HashMap<>();
        map.put("a", 1);
        map.put("b", 2);
        map.put("a", 3);

        System.out.println(map.get("a"));
        System.out.println(map.size());
    }
}
```

What will be the output?

Select one or more:

- **a. 3 and 2**
- **b. 1 and 3**
- **c. 3 and 3**
- **d. 1 and 2**

Question 8

Complete

Mark 0.00 out of 1.00

Consider the following code:

```
import java.util.HashMap;
import java.util.Iterator;
import java.util.Map;

public class Main {
    public static void main(String[] args) {
        HashMap<String, Integer> map = new HashMap<>();
        map.put("one", 1);
        map.put("two", 2);
        map.put("three", 3);

        for (Map.Entry<String, Integer> entry : map.entrySet()) {
            if (entry.getKey().equals("two")) {
                map.remove("two");
            }
        }

        System.out.println(map);
    }
}
```

What will happen when this code is executed?

Select one or more:

- **a. It will remove the key "two" and print {"one"=1, "three"=3}.**
- **b. It will run successfully and print {"one"=1, "three"=3} without any errors.**
- **c. It will remove the key "two" but print the original map.**
- **d. It will throw a ConcurrentModificationException.**

Question 9

Complete

Mark 1.00 out of 1.00

What will be the output of the following code?

```
import java.util.HashMap;

public class Main {
    public static void main(String[] args) {
        HashMap<String, String> map = new HashMap<>();
        map.put(null, "value1");
        map.put("key1", null);
        map.put(null, "value2");

        System.out.println(map.get(null));
        System.out.println(map.get("key1"));
    }
}
```

Select one or more:

- a. **"value1" and "value1"**
- b. **null and "value1"**
- c. **"value2" and null**
- d. **null and null**

Question 10

Complete

Mark 0.00 out of 1.00

Which of the following statements is true about handling collisions in a HashMap?

Select one or more:

- a. **HashMap does not handle collisions.**
- b. **HashMap doubles its size every time a collision occurs.**
- c. **HashMap uses a linear probing mechanism for collision resolution.**
- d. **HashMap uses chaining, where each bucket contains a linked list of entries.**
